

MicroBeads

Why do you think microbeads should be banned???

I think that microbeads should be banned because they're going into our food chains and they're unnatural and unhealthy for the fresh water fish and us. They are also causing water pollution. They're a hazard to freshwater aquatics. They're toxic to any aquatic life and they can cause bigger diseases, and if we don't do anything now it could give us bigger problems in the future.
